

Construction is Almost Complete on the Parrish Lane Interchange

The Utah Department of Transportation and Ralph L. Wadsworth Construction Company expect to complete the Parrish Lane Interchange Project in late-August/early-September, 2007. This project will improve traffic flow and ease congestion through the Parrish Lane interchange. This will be accomplished through the following improvements:

- Widening the Parrish Lane bridge with an additional left-turn lane from westbound Parrish Lane to southbound I-15
- Improving the I-15 northbound and southbound on- and off-ramps by repaving and restriping

Motorists will soon be able to utilize the new westbound lane as well as the newly improved ramps. In addition, a new lighting system will be in place on the corridor. The bridge will also include accommodations for a future eastbound lane. This eastbound lane will be put into service once improvements are made to the road and railroad bridge just west of the Parrish Lane bridge.

Traffic restrictions will continue through the remainder of the project. A detailed schedule is also available. To find out more about the project and receive project construction updates, please send the project team an e-mail at: parrishlaneinterchange@hwlochner.com.
